

## **WARRANTY**

DSX Tuning manufactured products are covered against defects in manufacturing and assembly for the life of the product. This warranty is not inclusive of damage that is due to user/installation error, negligence, or environment (force majeure). Electronic devices are designed as IP60 and are not to be considered waterproof or submersible; they should be kept in dry places and away from direct water contact. Wire harnesses are designed as abrasion resistant but not abrasion proof, and damage from cuts, rubbing, pulling/stretching, or excessive bends are not covered under warranty. Fuel lines are to be protected and will not be warranted for cut/rub/impact damage. Modification of any component immediately voids the warranty of the entire product and not just the component.

Certain components of DSX Tuning products that are not manufactured by DSX Tuning are subject to a 90 day warranty from receipt of the product. This includes flex fuel sensors, fuel pumps, and GM parts (tensioners, pulleys, fuel pumps, injectors, etc).

All other products not manufactured by DSX Tuning are subject to the manufacturer's warranty and are handled at the discretion of the manufacturer. DSX Tuning does not have the ability to override a manufacturer's warranty.
